

Yo Tenra

Building useful tools with AI, data, and practical experience

1@yotenra.com · Portfolio · GitHub · Wantedly

About me

I'm a master's student in Social Informatics at Kansai University. I tend to notice work that has to be explained or repeated each time. I use AI to turn those routines into tools that keep useful records and can improve with use. My earlier experience running a business and working with developers helps me connect the software with what someone actually needs to do.

I'm looking for opportunities in AI applications, prototyping, and business tools, during my studies or after graduation. Start date by agreement.

What I build

CorpLink-AI — From news files to research data

Feb–Mar 2026 · Source code

CorpLink-AI turns news files into company-relationship data and matrices for network analysis. To make repeated preparation easier, I built a web workflow with AI assistance: upload files, choose settings, and download results. Local matching and cached names come before model calls, reusing work already done.

Making software dependencies easier to explore

Master's research · Interactive demo

My research demo links network maps, rankings, and explanations for samples of **709 PyPI packages** and **591 Go packages**. Readers can compare software that many packages depend on directly with software that connects different parts of a network, using several structural measures.

Tools I use in daily life

With AI assistance, I build **OOTD** to connect clothes, orders, outfits, and wear history; **CalTracker** to carry my spreadsheet routine into a food and weight log; and **AWS Pass It** for explanations in Chinese, Japanese, and English and review of missed questions. Everyday use gives me the next thing to improve.

Where I've worked

Baseconnect — AI Engineer Intern

Apr 2026–Present · Part-time

I investigate company-data issues with engineers and AI tools, compare fixes with source evidence and counterexamples, and help prepare and check historical-data corrections. I also develop a personal work tracker that saves history, next steps, and sources so later AI sessions can pick up earlier work.

Kansai University — Teaching Assistant

Sep 2025–Present

I help students with practical classes and provide hardware and software guidance at the student service station, documenting issues and referring them for further support when needed.

Studio Keya_cc — Founder and Operator

Nov 2019–Dec 2025

I ran an in-game item and currency trading and consulting business: approximately **CNY 15 million in cumulative revenue** and **2,000+ unique customers**. Videos, guides, service procedures, and customer-support coordination helped connect advice with day-to-day service.

Holly Travel Int. Travel Agency — Assistant to the General Manager

Dec 2017–Dec 2021 · Guangzhou, China

I translated finance and business needs into requirements for three modules, discussed technical options and schedules with developers, and followed through on testing, revisions, and staff training.

Education and tools

- **Kansai University:** Master's student in Social Informatics, Apr 2025–Expected Sep 2027.
- **大阪情報ITクリエイター専門学校:** Systems Development coursework, Apr 2024–Mar 2025; withdrew.
- **Guangdong University of Finance & Economics:** Bachelor's degree in Financial Engineering, Sep 2014–Jul 2018.

I use Python, SQL, and Git in AI-assisted development, reading code and making focused changes. AI handles much of the implementation; I define requirements, assess business fit, and organise validation.

Qualifications: Fundamental Information Technology Engineer Examination (Japan), passed May 2024; JLPT N1, Dec 2023; TOEIC Listening & Reading 805, Aug 2022; BEC Higher, Grade C, May 2018. **Native languages:** Mandarin Chinese and Cantonese.
